2.4 Summary

Bahrain currently adopts the Gulf Standards Organisation (GSO) Standard for Unbottled Drinking Water (GS/149/2008) which only contains a limited number of parameters compared to those adopted by other GCC states (Oman, Qatar and Abu Dhabi).

Various recommendations have been made as to proposed revisions to the water quality standards which were presented in revision A of this report. These have discussed with representatives from EWA. Following these discussions EWA provided a table setting out a new set of potable water quality standards that they prefer to work to. These have been compiled into Tables 2.2, Table 2.3, Table 2.4 and Table 2.5. These parameters have prepared based the standards included in the Hidd and Al Dur Power and Water Purchase Agreements and consideration of the World Health Organization Guidelines for Drinking-water Quality (Fourth Edition), standards adopted in other countries and existing practices at comparable treatment plants.
